

KEY THINGS TO CONSIDER

Don't waste another minute wasting water.

SAVE WATER

For A Sustainable Water Future

If the limited outdoor watering days are creating brown patches on your lawn, consider placing drought-tolerant plants in hard-to-water areas.

- If you plant drought-tolerant landscape, modify existing sprinkler
- Convert to a drip irrigation, weather-base irrigation, or "smart " controllers are efficient
- Rotating sprinkler nozzles (minimum of 15 minutes)

Other ways to reduce your outdoor water use:

 <p>USE A BROOM TO CLEAN OUTDOOR AREAS <i>saves</i> 8-18 GALLONS per minute</p>	 <p>ADJUST SPRINKLER TO WATER PLANTS, NOT DRIVEWAY <i>saves</i> 12-15 GALLONS each time you water</p>	 <p>INSTALL A "SMART" CONTROLLER <i>saves</i> 24+ GALLONS per day</p>
 <p>USE MULCH ON SOIL SURFACE <i>saves</i> 20-30 GALLONS per 1,000 sq. ft. each time</p>	 <p>WATER PLANTS EARLY IN THE AM <i>saves</i> 25 GALLONS each time you water</p>	 <p>INSTALL DRIP IRRIGATION <i>saves</i> 15 GALLONS each time you water</p>

Outdoor watering makes up 60% of an average household, but there are also ways you can change your indoor water habits to create 20-25% reduction in your overall water use:

 <p>TURN OFF WATER WHEN BRUSHING TEETH OR SHAVING <i>saves</i> 10 GALLONS per person/day</p>	 <p>TAKE FIVE MINUTE SHOWERS INSTEAD OF 10 MINUTE SHOWERS <i>saves</i> 12.5 GALLONS with a water efficient showerhead</p>	 <p>RUN DISHWASHER WHEN FULL INSTEAD OF HALF FULL <i>saves</i> 5-15 GALLONS per load</p>
 <p>FIX LEAKY TOILETS <i>saves</i> 30-50 GALLONS per day/toilet</p>	 <p>WASH ONLY FULL LOADS <i>saves</i> 15-45 GALLONS per load</p>	 <p>FILL THE BATHTUB HALFWAY OR LESS <i>saves</i> 12 GALLONS per person</p>
